January 14, 2013

Dear WindTronics Customer/Vendor/Dealer:

It is with tremendous disappointment that I am writing this letter and announcement to you. WindTronics' sole source supplier of the turbine and component parts, Altronics Energy, LLC, has closed its doors. Several months of negotiations and workable proposals presented to Altronics to avoid this devastating situation were unsuccessful.

So now, despite almost four years of diligent work developing a novel and patented wind turbine technology, the business formed around this technology has failed as it was not able to achieve the high level of operating performance hoped for from the onset to allow it to continue. As a result, WindTronics' Board of Directors has determined that it too must also close its doors.

Consequently and effective immediately, WindTronics will no longer be able to provide any warranty, service or business resolutions that may be pending or arise. Altronics provided all of WindTronics Wind Turbine sourcing and fabrication. All support personnel of WindTronics have left the company.

Furthermore, Reg Adams has resigned from WindTronics so please direct any written communications to the address above or to Greg Bakeman at gregb@windtronics.com. As I have indicated in this letter to you, WindTronics can do little to assist you but during the process of closing Greg will try to answer any questions you may have.

I want to thank you for the dedication you have given to the WindTronics technology and cannot express to you enough how deeply I regret that the WindTronics company failed in its support of your efforts.

Cordially,

Dr. Imad Mahawili
